

The image shows a Microsoft Power BI workspace featuring a detailed financial data matrix. The primary table breaks down key performance indicators—such as average, median, and extreme prices, alongside total orders, sum of sales, and year-over-year (YoY) growth—organized hierarchically by fiscal year and month from FY2018 through early FY2020. The "Sales YTD" column effectively utilizes embedded data bars to provide a quick visual gauge of cumulative performance over time. On the right side, the Visualizations and Data panes reveal the report's underlying structure, highlighting the specific fields driving the matrix and the active data models, including dedicated tables for Sales and Time Intelligence metrics.
